

Content List

1. Molecules and Their Interactions Relevant to Biology

1. A. Structure of Atoms, Molecules and Chemical Bonds

1. A. I. Chemical Bonds and Its Types

1. A. II. Water

1. A. III. Comparison Between Different Types Of Bonds And Their Biological Importance

1. B. Composition, Structure and Function of Biomolecules

1. B. I. Carbohydrates

1. B. II. Lipids

1. B. III. Proteins

1. B. IV. Nucleic acids

1. B. V. Vitamins

1. C. Bioenergetics

1. C. I. Glycolysis

1. C. II. Citric Acid Cycle

1. C. III. Oxidative Phosphorylation or Electron Transport Chain or Respiratory Chain

1. C. IV. Fermentation / Difference in Energy Production Between Aerobic and Anaerobic Respiration

1. D. Metabolism

1. D. I. Cori Cycle

1. D. II. Lipid Metabolism

1. D. III. Glycogen Metabolism

1. E. Enzyme

1. E. I. Enzyme

1. E. II. Enzyme Cofactor and Coenzyme

1. E. III. Enzyme-Substrate Complex

1. E. IV. Enzyme Kinetics

1. F. Thermodynamics

1. F. I. Gibb's Free Energy

1. F. II. Half Life

2. Cell Biology

2. A. Membrane structure and function

2. A. I. Plasma membrane

2. A. II. Membrane transport

2. B. Structural organization and functions of intracellular organelles

2. B. I. Intracellular organelles

2. B. II. Cytoskeleton: Structure and functions

2. B. III. Few important information

2. C. Organization of genes and chromosomes

2. C. I. Operons

2. C. II. Unique and repetitive DNA

2. C. III. Split genes or interrupted genes

2. C. IV. Structure of chromatin and chromosome

2. D. Cell division and cell cycle

2. D. I. The cell cycle

2. D. II. Cell division mitosis and meiosis

2. D. III. Comparison between Meiosis I & Meiosis II

2. D. IV. Cell cycle regulation and control of cell cycle

2. D. V. Cell cycle checkpoint

2. E. Microbial physiology

2. E. I. Growth curve of bacterium

2. E. II. Stress response

2. F. Protein Trafficking
3. Fundamental Processes
3. A. DNA replication, repair and recombination 3. A. I. Overview 3. A. II. Important rules for DNA replication 3. A. III. Enzymes and proteins involved in DNA replication 3. A. IV. DNA replication process 3. A. V. Rolling circle mechanism of DNA replication 3. A. VI. Telomere replication 3. A. VII. Replication of organelle DNA (Mitochondrial DNA) 3. A. VIII. DNA recombination 3. A. IX. DNA repair 3. A. X. Mutations
3. B. RNA synthesis and processing 3. B. I. Basic structure of RNA 3. B. II. RNA polymerases 3. B. III. RNA machinery 3. B. IV. Transcription factors 3. B. V. RNA processing 3. B. VI. RNA splicing 3. B. VII. RNA editing 3. B. VIII. RNA transport
3. C. Protein synthesis and processing 3. C. I. Role of RNA 3. C. II. Ribosome 3. C. III. Protein synthesis 3. C. IV. Proof reading 3. C. V. Genetic code 3. C. IX. Translational inhibitors 3. C. X. post translational modification of protein
3. D. Control of gene expression at transcription and translation level 3. D. I. Control of gene expression of transcription and translational level 3. D. II. Gene expression regulation at translational level 3. D. III. Gene silencing 3. D. IV. RNA mediated genome editing tools
4. Cell Communication and Cell Signaling
4. A. Cell signaling and Apoptosis 4. A. I. Cell signaling overview 4. A. II. Types of signaling 4. A. III. Cell signaling in a nutshell 4. A. IV. Apoptosis
4. B. Host parasitic interaction 4. B. I. Types of Host-Pathogen Interactions 4. B. I. Koch's Postulates 4. B. II. Recognition and entry processes of different pathogens like bacteria, viruses into animal and plant host cells
4. C. Immunology 4. C. I. Immune system, innate immunity and adaptive immunity 4. C. II. Cells of immune system 4. C. III. Antigen and antibody 4. C. IV. MHC molecule, Antigen processing and presentation

<ul style="list-style-type: none"> 4. C. V. Complement system 4. C. VI. Toll-like receptor 4. C. VII. Cytokine 4. C. VIII. Hypersensitivity 4. C. IX. Autoimmunity 4. C. X. Immunodeficiencies 4. C. XI. Immune response
<ul style="list-style-type: none"> 4. D. Cancer 4. D. I. Properties of cancer cell 4. D. II. Cellular Pathology of Cancer 4. D. III. Molecular basis of cancer 4. D. IV. Cancer treatment 4. D. V. Role of genes in Cancer 4. D. VI. Tumor suppressor gene (example p53)
4. E. Cell adhesion molecules
5. Developmental Biology
<ul style="list-style-type: none"> 5.A. Basic concept of development 5. A. I. The principles of development 5. A. II. Simplified developmental hierarchy of animals 5. A. III. Mechanisms of developmental commitment 5. A. IV. Community effect 5. A. V. Cell fate (fate maps) 5.A. VI. Cytoplasmic determinants
<ul style="list-style-type: none"> 5.B. Gametogenesis, fertilization and early development 5. B. I. Oogenesis 5. B. II. Spermatogenesis 5. B. III. Processes of spermatogenesis and oogenesis result in different numbers of gametes with different amount of cytoplasm 5. B. IV. Fertilization
<ul style="list-style-type: none"> 5. C. Plant Reproduction 5. C. II. Embryo sac development: III. Double fertilization 5. C. IV. Zygote formation 5. C. V. Cleavage 5. C. VI. Blastula formation 5. C. VII. Gastrulation and its process 5. C. VIII. Establishment of symmetry in plants 5. C. IX. Morphogenesis I and Positional information
<ul style="list-style-type: none"> 5. C. Plant Reproduction 5. C. I. Embryo sac development 5. C. II. Double fertilization 5. C. III. Zygote formation 5. C. IV. Cleavage 5. C. V. Blastula formation 5. C. VI. Gastrulation and its process 5. C. VII. Establishment of symmetry in plants 5. C. VIII. Morphogenesis I and Positional information
<ul style="list-style-type: none"> 5. E. Programmed cell death, aging and senescence 5. E. I. Programmed cell death 5. E. II. Aging

5. E. III. Senescence

6. System Physiology - Plant

6. A. Photosynthesis

6. A. I. Major class of pigments occurring in photosynthetic organisms

6. A. II. Action spectra and absorption spectra

6. A. III. Light harvesting complex and reaction centers

6. A. IV. Light reaction

6. A. V. Non cyclic photophosphorylation

6. A. VI. Water-splitting activity of the oxygen evolving complex

6. A. VII. Prokaryotic photosynthesis

6. A. VIII. Dark reaction: - Calvin cycle

6. A. IX. Photorespiration or C₂ Cycle

6. A. X. C₄ cycle

6. A. XI. CAM Pathway (Crassulacean Acid Metabolism)

6. A. XII. Sucrose and starch synthesis

6. A. XIII. Differences between C₃, C₄ and cam pathways

6. B. Nitrogen metabolism

6. B. I. Biological nitrogen fixation

6. B. II. Nitrification

6. B. III. Denitrification

6. B. IV. Nitrogen assimilation

6. B. V. Ammonium assimilation

6. B. VI. Symbiotic nitrogen fixation

6. C. Plant Hormones

6. C. I. Auxin

6. C. II. Gibberellins

6. C. III. Cytokinin

6. C. IV. Ethylene

6. C. V. ABA or Abscisic acid

6. D. Sensory photobiology

6. D. I. Flowering genes

6. D. II. Phytochrome and cryptochrome

6. D. II. Phototropin

6. D. IV. Photoperiodism

6. D. V. Night length is actually important, and not day length

6. D. VI. Perception of photoperiodic stimulus

6. D. VII. Blue light promotes flowering

6. D. VIII. Vernalisation and flowering

6. D. IX. ABC model

6. E. Plant secondary metabolites

6. E. I. Terpenes

6. E. II. Phenols

6. E. III. Glycosides

6. E. IV. Alkaloids

6. E. V. Phytoalexins

6. E. VI. Phenolic compounds

6. F. Stress physiology

6. F. I. Water deficit (drought)

6. F. II. Osmotic adjustment of cells helps maintain plant water balance

6. F. III. Flooding

6. F. IV. High temperature stress

- 6. F. V. Low temperature stress
- 6. F. VI. Chilling stress
- 6. F. VII. Salinity stress
- 6. F. VIII. Jasmonic acid and biotic stress
- 6. F. IX. Systemic response

7. System Physiology - Animal

- 7. A. Blood and circulation
 - 7. A. I. Blood corpuscles
 - 7. A. II. Hematopoiesis
 - 7. A. III. Blood volume and its regulation
 - 7. A. IV. Blood groups
 - 7. A. V. Hemoglobin
 - 7. A. VI. Hemostasis

- 7. B. Cardiovascular system
 - 7. B. I. Comparative anatomy of heart structure
 - 7. B. II. Myogenic heart
 - 7. B. III. ECG and its principle
 - 7. B. IV. The heart as a pump
 - 7. B. V. Neural regulation of heart

- 7. C. Endocrinology and reproduction
 - 7. C. I. Basic mechanism of hormone action
 - 7. C. II. Hormones and their associated receptors
 - 7. C. III. Hormone and their associated disease
 - 7. C. IV. Hormones of anterior pituitary and posterior pituitary
 - 7. C. V. Glands of endocrine system
 - 7. C. VI. Hormonal biosynthesis
 - 7. C. VII. Control of hormone release
 - 7. C. VIII. Gametogenesis
 - 7. C. IX. Oogenesis
 - 7. C. X. Neuroendocrine regulation

- 7. D. Nervous system
 - 7. D. I. Neurons
 - 7. D. II. Transport across axon
 - 7. D. III. Excitation of nerve cells
 - 7. D. IV. Neuroanatomy of brain and spinal cord

- 7. E. Excretory system
 - 7. E. I. Kidney
 - 7. E. II. Urine formation
 - 7. E. III. Acid-base balance

7. F. Thermoregulation

- 7. G. Digestive system
 - 7. G. I. Carbohydrates
 - 7. G. II. Protein
 - 7. G. III. Fat

- 7. H. Respiratory system
 - 7. H. I. Animal group and their respiratory system
 - 7. H. II. Anatomy of respiratory system
 - 7. H. III. Transport of gases
 - 7. H. IV. Regulation of respiration

8. Inheritance Biology

- 8. A. Mendelian principles

8. A. I. Dominance 8. A. II. Segregation 8. A. III. Independent assortment
8. B. Concept of gene 8. B. I. Allele 8. B. II. Multiple alleles 8. B. III. Pseudoallele 8. B. IV. Complementation test
8. C. Extensions of Mendelian principles 8. C. I. Gene interaction 8. C. II. Intra-allelic gene interaction 8. C. III. Complete dominance 8. C. IV. Incomplete dominance 8. C. V. Overdominance 8. C. VI. Inter-allelic gene interaction 8. C. VII. Complementation 8. C. VIII. Epistasis 8. C. IX. Supplementary gene 8. C. X. Pleiotropy 8. C. XI. Penetrance and expressivity
8. D. Extra chromosomal inheritance
8. E. Microbial genetics 8. E. I. Transformation 8. E. II. Conjugation 8. E. III. Interrupted mating to map bacterial genes 8. E. IV. Circularity of gene map 8. E. V. Transduction
8. F. Linkage and crossing over
8. G. Genomic imprinting
8. H. Polygenic and quantitative inheritance
8. I. Mutation 8. I. I. Deletion 8. I. II. Duplication 8. I. III. Translocation 8. I. IV. Inversion 8. I. V. Ploidy 8. I. VI. Insertional mutagenesis
8. J. Genetic disorder
8. K. Homologous and non-homologous recombination including transposition 8. K. I. Homologous recombination 8. K. II. Holliday model of recombination 8. K. III. Repair of double-strand break by homologous chromosome 8. K. IV. Non-homologous end repairing 8. K. V. Transposition
9. Diversity of Life forms
10. Ecology and Environmental Biology
10. A. Ecology terminologies
10. B. Ecosystem 10. B. I. Different types of ecosystem 10. B. II. Ecosystem ecology

<ul style="list-style-type: none"> 10. B. III. Ecosystem structure 10. B. IV. Ecosystem function
